                                                                  The present sequence represents CENP-E (centromere-associated protein-E) CC of Xenopus. The protein has at least one of plus end-directed microtubule CC motor activity, ATPase (adenosine triphosphatase) activity and control of control ble binding activity. CENP-E is the motor that powers chromosome CC movement toward microtubule plus ends and is essential for congression CC cell proliferation. Agents that modulators of CENP-E can thus control CC therapeutic, bioagricultural and diagnostic agents, e.g. for treatment CC of unwanted cell proliferation (typical of many examples are tumors and CC metastases; vascular malfunction; inflammatory and immune diseases; CC angiogenesis; hypertension; restenosis; and fungal infections), also as CC insecticles) and plant growth regulators or activators for improving CC vields. CENP-E is also a diagnostic marker for dividing cells, including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

```
This sequence represents the smooth muscle myosin heavy chain SM1 isoform protein. The SM1 coding sequence was isolated from a mouse embryo cDNA library using probes based on the rabbit smooth muscle myosin heavy chain SM2 isoform. The isolated coding sequence is included in the gene therapy vector of the invention. The vector of the invention consists of the coding sequence inserted into a retrovirus, adenovirus, associated adenovirus or animal-expression plasmid vector (such as pCXN2 or PAGE208). The vector can be used in the gene therapy treatment of arteriosclerosis, particularly for the reduction of restenosis occurring following coronary artery catheterisation for widening of sclerotic
                                                                                                                                                                                                                                                                                                                                                                               DNA encoding smooth muscle myosin heavy chain SM1 isoform - use a vector for gene therapy for reduction of re-stenosis following coronary artery catheterisation
                                                                                                                                                                                                                                                                                                                                      Claim 5; Page 14-27; 42pp; Japanese.

It is prepared by chromatographically purifying an optionally pre-purified cell extract, cell supernatant or cell filtrate of stimulated normal human leucocytes or human embryonic epithelial lung cells. Alternatively, the protein can be produced by microorganisms or continuous mammalian cell lines, transformed with plasmids encoding MRP-160. The invention also covers the polypeptide fragment from amino acids 878-1427 and derivatives of the protein in which the amino and/or hydroxyl functions are glycosylated or acylated and have mol. wt.s of 190 and 140kD, respectively.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                         1090

                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human nucleic acids (AA157798-AA161369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                          assays for receptor activity, arthritis and infi

                                                                        밁
                                                                                                       Ş
                                                                                                                                                                                                                                        CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2) creatines against P. falciparum infection comprising (I) or (II). CC (I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisers or a monoclonal CC antibody raised to immunogens comprising the sequences of (I), are CC useful in the detection of infection with P. falciparum. Furthermore, CC (I) (especially when they are rifins or secreted or membrane proteins) CC can aid the identification of drugs to treat or prevent P. falciparum CC infection, or they can be used to identify drug resistance in CC p. falciparum. Sequencing of the Plasmodium chromosome 2 and the CC complexity of the parasite biology, a process hampered by the CC complexity of the parasite lefcycle, and provide new targets for CC complexity of the parasite lefcycle, and provide new targets for CC complexity of the parasite lefcycle, and provide new targets for CC complexity of the parasite is a pressing need for vaccines and mosquito resistance to insecticides have led to a resurgence of malaria in many CC parts of the world, and there is a pressing need for vaccines and new CC and protein sequences given in the present invention, but which are not CC specifically mentioned within the specification.
                                                                                                                                           Query Match

                                                                The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-JUN-1998;

Quality coverage: 10.4 in Q20 bases; sum-of-contigs
NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (bases 1 to 148041)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (bases 1 to 148041)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     * consists of 19 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* 39368 contig of 39368 bp in length

* 39469 4956: cantig of 4488 bp in length

* 39469 4956: contig of 4488 bp in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bloom, S., Dors, M., Dickhoff, R., Harrison, G., James, R., Lasky, S., Madan, A., Ratcliffe, A., Shaffer; T. and Hood, L.
